***Allowable Subject Matter***

7. Claims 1, 3-9, 11, 12 and 14-20 as amended are allowed.
8. The following is an examiner's statement of reasons for allowance:

Regarding claim 1, and similarly claims 9, 11, 12 and 20, closest art of record does not disclose, teach or fairly suggest all limitations.

Specifically, while the H.26L standard defines periodic quantization (quantizing image data in such a way that when the quantizing parameter increases by one, the coarseness of the resultant image increases by 12 percent) [as Applicant admits on page 2 of the instance application], and numerous prior art references (see below) disclose using a quantization step that depends on image complexity (i.e., activity), and/or buffer status (e.g., fullness) and/or code amount, none, alone or in combination, disclose, teach, or fairly suggest at least first determining a change amount to the quantizing parameter based on image complexity (with the quantization scheme satisfying the periodic quantization requirement of H.26L), and then, based on the determined change amount and the code amount of the encoded image data, generating the quantizing parameter to use.
